

Co-Located Battery Storage Projects: Key Considerations for Project Finance

Media Mentions

October 24, 2023 | *LexisNexis* | 1 minute read | London

Bracewell's **Oliver Irwin**, **Nicholas Neuberger** and **Jessica Hastings** collaborated with *LexisNexis* to produce a Practice Note on some of the key considerations for lenders and developers seeking to project finance co-located battery storage projects.

A growing number of developers are announcing the successful project financing of their co-located battery storage projects. This is remarkable progress, given that as recently as in 2018, grid scale batteries were regarded as a nascent asset class, and many financiers have written them off as unsuitable for project finance.

Some of the topics related to co-located battery storage projects covered in the Practice Note include:

- construction issues
- property considerations
- planning considerations
- other general issues involving battery storage projects
